

The community service once provided by local radio stations has deteriorated badly over the past ten years. Overall their efforts to provide the listening public with adequate news and traffic service has become secondary to "jock talk" and commercials. Now satellite radio is providing the service the traveling public needs to be kept abreast of crisis roadway situations. It's the same old story, radio broadcasters will give the public the least they can get by with until someone else fills the void then they scream "foul". Please let the market work as it should. Please oppose HR 4026.
